What is Scrubs Co-Pilot?

Scrubs Co-Pilot is an ambient AI scribe. It helps your healthcare provider to be more focused on you instead of having to physically take manual notes or type into their computer.

With your consent, Scrubs Co-Pilot listens to the conversation between you and your healthcare provider and summarizes the medical and health parts of the conversation into notes to help with your care.

Your healthcare provider will review the notes for accuracy and then save them in your electronic health record. They can also provide you with a copy of the plan from your conversation.

How does Scrubs Co-Pilot use my data?

Your healthcare provider can keep your identity anonymous by never entering any information in the system that links to you. If the summary notes from your visit are saved on the system by your healthcare provider, they are fully encrypted to protect your privacy. The company cannot see or link your identity to any information about you from the conversation.

The audio file is automatically deleted after 24 hours, but your healthcare provider can also delete it immediately along with any transcripts or summary notes after they copy and save it into your electronic health record (EHR). There will be nothing retained on the system.

Scrubs Co-Pilot does NOT use your data to train our system.

All information on our database is stored here in Canada, and Scrubs Co-Pilot is fully compliant with all federal and provincial privacy and security laws.

How does Scrubs Co-Pilot help with my care?

When your clinician doesn't have to physically take notes, they can focus their attention only on you.

In addition, the plan that is agreed between you and your healthcare provider can be provided to you so everyone has the same information and can follow the plan without forgetting anything. The plan is also flexible so if anything needs to change, you can work on it together. This results in shared progress towards your health goals.
